The Origination. _____

Cryptocurrency and blockchain technology is the future of the world. It can solve our many problems and open a whole new world of opportunities and human freedom.

CoinGecko reports that the total market capitalization of cryptocurrencies is 2.8 trillion US dollars as of December 2021. According to Statista.com, there are nearly six thousand crypto coins and over ten thousand tokens around the globe at present (2022). The crypto market has grown over 600 percent from \$397 billion as of November 3rd of 2020 and added nearly 1 trillion US dollars in just a little over a month.

The Problem._____

The cryptocurrency market is growing too fast. At present, there are more than 300 million crypto users worldwide. Crypto is becoming a part of people's life.

While crypto brings a ton of benefits, it has some downsides too. Celebrities, influencers, and whales highly manipulate the market. Panic selling and massive dumps can show unwanted price spikes.

This is where Optimum comes into play. Optimum project is designed to solve those problems and make the crypto world a better place.

Introducing Optimum._____

Optimum is a new crypto project that aims to create a safe, secure, and optimal environment for crypto investors and holders. Its primary target is to ensure that every investor and holder reaches their true potential investing goals.

To achieve the goal, Optimum utilizes a dynamic transaction tax mechanism. It makes sure that no whales or celebrities manipulate the market and protect the project from sudden spike drops. In addition to that, the tokenomics is designed in such a way that it benefits the holders as much as possible.

Optimum operates on Binance Smart Chain (BSC). BSC provides robust security features, is safe, and has lower gas fees. It ensures that users can make transactions at a meager gas fee without compromising safety.

Transaction Tax Explanation._____

Total supply of Optimum (\$OPX) is 1,000,000,000,000 (1 Trillion tokens) with a market circulating supply of 980,000,000,000 (980 Billion) tokens. In every transaction, users have to pay a buy or sell tax. The tax mechanism is built to benefit the holders and protect them from any kind of manipulation and price spikes.

Buy Tax Explanation

A user has to pay a 12% tax on buying tokens. 10% of it will be redistributed to all holders, and 2% goes to team wallet for developing and marketing purposes.

Sell Tax Explanation

To ensure \$OPX holders' protection, the sell tax has been dynamically divided into two sections. A holder will be taxed based on how many days they have held \$OPX.

If a holder sells the token within 7 days of purchasing, he/she will be taxed at 30%. On the other hand, if a holder decides to sell the token after 7 or more days of purchasing, he/she will be taxed only at 13%. Meaning the sell tax is reset after 7 days of purchasing.

In addition to that, a holder is limited to selling 40% of their total holding every 24 hours. That means no one can sell more than 40% of their tokens in a day, even if they want to. There is no limitation on buying tokens, and anyone can purchase anytime, anywhere.

This sell tax mechanism ensures \$OPX holders are safe from pump and dump scams, crypto whales, and market manipulations.
